

Introduction

Chapter-1 Introduction

1.1 Introduction

Airline Reservation System contains the details about flight schedules and its fare tariffs, passenger reservations and ticket records. An airline's inventory contains all flights with their available seats. The inventory of an airline service is generally divided into three category of classes (e.g. First, Business or Economy class) and each category is having seats up to 26 bookings, along with prices and booking conditions. Inventory data is imported and maintained through a Schedule Distribution System over standardized interfaces. One of the core functions of the inventory management of airline reservations is the inventory control. Inventory control steers how many seats are available for the different booking classes, by opening and closing individual booking classes for sale. In combination with the fares and booking conditions stored in the Fare Quote System the price for each seat is determined.

1.2 Existing System

In few countries if a person wants to book a flight ticket, he Use to follow one of these things:

- Manually goes to the Airport and book his ticket.
- Downloading the ticket form as paper document, filling it manually and submitting it at Airport.
- Fill the Ticket form on system and get the print out as paper documents to submit it at Airport.
- Booking the Ticket at some particular registered ticket counters in online.
- Even above approaches make a ticket booking online, it was not completely done on online. Passenger may not have much freedom over this approach.
- Hence the Passenger may or may not be satisfied with this approach as it includes manual intervention like travelling to Airport for booking his ticket.
- Cannot Upload and Download the latest update.
- No Use of Web Services and Remoting.
- Risk of mismanagement and data when the project is under development.
- Less Security
- Fewer Users - Friendly

1.3 Proposed System

The Proposed system ensures the complete freedom for users, where user at his own system can logon to this website and can book his ticket. Our proposed system allows only registered users to book the tickets, view timings and cancel their tickets.

In this Proposal the entire work is done on online and ticket with id is also provided for passengers as a print document. Here passengers can send their queries and suggestions through a feedback form.

To debug the existing system, remove procedures those cause data redundancy, make navigation sequence proper To build strong password mechanism.

Advantages:

- User friendliness provided in the application with various controls.
- The system makes The overall project management much easier and flexible.
- It provides high level of security with different level of authentication.

System Requirement

Software Requirement Specifications

2.1 Software requirement: Introduction to ASP.NET with C#

Front End Tool:

ASP.NET is a development environment which runs under Microsoft Visual Studio 2010. ASP.NET is “Event Driven” because all activities in a program are triggered by one event or another. ASP.NET is also called as “Object based language” because it moves around object/control. Development process in ASP.NET is very fast as compare to Traditional Procedure Oriented Programming. So, ASP.NET is very useful environment for develop web Applications. The basis of this development platform, it consist of two primary components –

Common Language Runtime --

It is the environment where all programs in .NET are run. It provides various services like memory management & thread mgmt. Programs that run in the CLR need not manage memory, as it is completely taken care by the CLR.

The .NET Framework Base class --

Software developer uses a personalized set of tools in terms of classes & components. The .NET class library provides a common interface between all the different .NET programming languages.

Microsoft Visual Studio Editions--

It has Two Editions-

Microsoft Visual Studio 2010

- .NET framework 3.5

- .NET framework 4.0

- .NET framework 4.5

Microsoft Visual Studio

- - .NET framework 4.5 Define rules that language must be follow which helps to insure that object written in different languages can interact with each other.

e.g. Dim I as integer(ASP) into i (C#) 4 bytes 4 bytes System int 32

Features of .NET: -

Interoperability:-

Because computer systems commonly require interaction between new and older applications, the .NET Framework provides means to access functionality that is implemented in programs that execute outside the .NET environment.

Common Language Runtime Engine:-

The Common Language Runtime (CLR) is the execution engine of the .NET Framework. All .NET programs execute under the supervision of the CLR.

Language Independence:-

The .NET Framework introduces a Common Type System, or CTS. Because of the CTS feature, the .NET Framework supports the exchange of types and

object instances between libraries and applications written using any conforming .NET language.

Base Class Library:-

The Base Class Library (BCL), part of the Framework Class Library (FCL), is a library of functionality available to all languages using the .NET Framework. The BCL provides classes which encapsulate a number of common functions.

Simplified Deployment:-

The .NET Framework includes design features and tools that help manage the installation of computer software to ensure that it does not interfere with previously installed software, and that it conforms to security requirements.

Security

The design is meant to address some of the vulnerabilities, such as buffer overflows, that have been exploited by malicious software. Additionally, .NET provides a common security model for all applications.

2.2 Database requirement - Introduction to SQL server

Features of SQL server:-

SQL server is a free and easy to use database product. It is designed to provide a database platform that offers superior ease of use, enabling fast deployments for its target scenarios. Features like auto close & the ability to copy database as file which are enabled by default in SQL server , while the high availability & business intelligence features are absent . It is very easy to “scale up”. SQL server was developed with two distinct uses in mind. The first is as server product , especially as a web server or database server . Second is as local client data store where the application data access does not depends on the network. Ease of use and simplicity are the key goals.

The two main usage scenarios of SQL server are:

- Hobbyist building client/server application.
- Non-professional developers building web applications.

❖ Security

For SQL server, one of the goals is to provide secure defaults for the different components. For instance, the networking protocols such as TCP/IP and Named Pipes are turned off. SQL browser service is not started unless the user explicitly asks for this in the setup command line.The SA or system admin account is disabled by default if Windows Authentication is used. Normal users on the machine have almost no privileges on the SQL server CIVIL REGISTRY instance. A local Administrator on the server must explicitly grant relevant permissions for normal users so that they can use SQL functionality.

Attach ‘DB’ Filename

You can specify a relative or absolute file path for the Attach DB File Name connection string entry. The specified database file is attached when the connection is opened and this database is used as the default database for that connection. If the database is already attached when Attach DB File Name is invoked, then attach does nothing. This keyword supports a special string called **|Data Directory|** that points at runtime to the data directory of the application where database files are stored. This special string should be at beginning of the file path, works only against a local file system, and checks are done for Syntax so that the file path is not higher than the directory pointed to by the substitution string.

Auto-Close

This feature releases the file locks on the user database when there are no active connections to it. Thus, the database is ready to moved or copied after the application that uses it is closed.

Feature Description

❖ Online Restore

With SQL server 2005, database administrators are able to platform a restore operation while an instance of SQL Server is running. Online restore improves the availability of SQL Server because only the data being restored is unavailable; the rest of the database remains online and available.

❖ Online Indexing Operations

The online index option allows concurrent modifications (updates, deletes, and inserts) to the underlying table or clustered index data and any associated indexes during index data definition language(DDL) execution. For example, while a clustered index is being rebuilt, you can continue to make updates to the underlying data and perform query against the data.

❖ Fast Recovery

A new faster recovery option improves availability of SQL Server databases. Administrators can reconnect to a recovering database after transaction log has been rolled forward.

❖ SQL Server Management Studio

SQL Server 2005 includes SQL Server Management Studio, a new integrated suite of management tools with the functionality to develop, deploy and troubleshoot SQL Server database, as well as enhancements to previous functionality.

❖ Dedicated Administrator Connection

SQL Server 2005 provides a dedicated administrator connection that administrators can use to access a running server even if the server is locked or otherwise unavailability . This capability enables administrators to troubleshoot problems on a server by executing diagnostic functions or Transact-SQL statements.

❖ Hosted Common Language Runtime

With SQL Server 2005 developers can create database objects using familiar languages such as Microsoft Visual C#.NET and Microsoft ASP.NET. Developers can also create two new objects –user-defined types and aggregates.

❖ Native XML Support

Native XML data can be stored, queried, and indexed in SQL Server database -allowing developers to build new classes of connected applications around Web services and across any platform or device

❖ Security Enhancement

The security model in SQL Server 2005 separates users from objects, provides fine-grain access, and enables greater control of data access. Additionally, all system tables are implemented as views, providing more control over database system objects.

❖ Web Services

With SQL Server 2005 developers can develop Web services in the database tier, making SQL Server a hypertext transfer protocols (HTTP) listener and providing a new type of data access capabilities for Web services access capability for Web service – centric applications.

2.3 Hardware Requirement:

HARDWARE REQUIREMENT

- PROCESSOR : Pentium IV & Above.
- RAM : 2 GB & Above.
- HARD DISK SPACE : 80 GB minimum.
- PRINTER : Dot Matrix / Ink Jet
- MONITOR : Color

SOFTWARE REQUIREMENT:

OPERATING SYSTEM : 2000 / XP/Vista.

VISUAL BASIC .NET VERSION : 2008 Express Edition

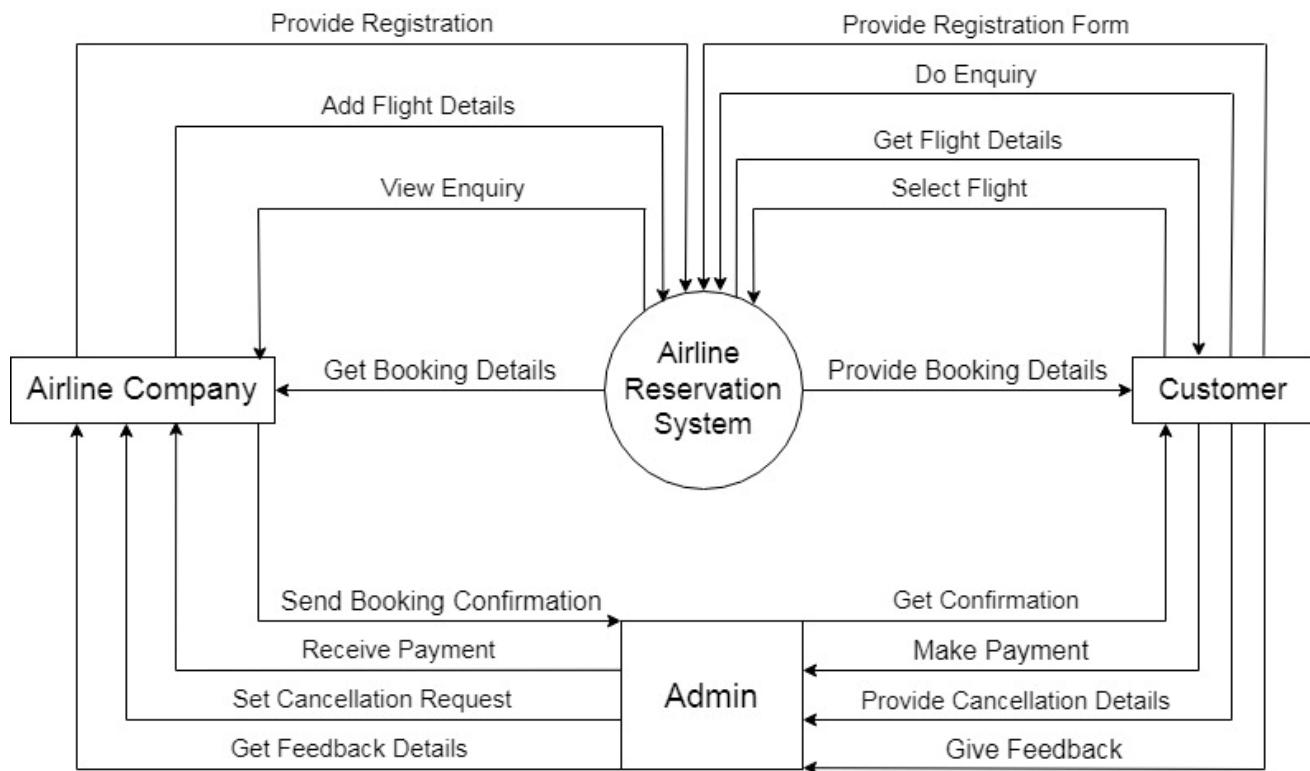

Framework : 3.5 and Above

Airline Reservation System

Customer Panel

The screenshot shows the homepage of the Airline Reservation System. At the top, there is a search bar with the URL "localhost:62951/Airline_Hotel/User/Home.aspx". Below the header, there is a banner with a sunset and an airplane background. On the left, there is a sidebar with icons for Home, View Booking, Visa, View Airlines, Feedback, and Contact Us. The main content area features a search form with fields for "Flight From" (set to Ahmedabad), "Flight To" (set to Ahmedabad), "Depart" (date field), "Class" (First Class), and "Travelers" (set to 1). A green "Search" button is located at the bottom of the form.

Reservation

The screenshot shows the "Customer Reservation" page. At the top, there is a header with the URL "localhost:62951/Airline_Hotel/Cust...". Below the header, there is a banner with a sunset and an airplane background. On the left, there is a sidebar with icons for Home, View Booking, My Profile, Cancel Booking, Feedback, and Complaints. The main content area has two sections: "Booking Form" and "Payment Details". The "Booking Form" section contains fields for PNR NO (25), Customer Name (Shravani Mask), Flight Name (782349), Starting Place (Kochi), Ticket Price (8599), Date of Journey (3/5/2024), Aadhar No, Number Of Ticket (1), Ending Place (Ahmedabad), and Total Price (8599). The "Payment Details" section contains fields for Payment ID (13), Card No, Expiration, Gst (12%), Payment Mode (radio buttons for Online Payment and UPI), Payment Date, CVV, Amount (8599), Total Amount (9630.88), and Booking ID (25). At the bottom, there are two orange buttons: "Book Now" and "Print Bill".

Admin Login

The screenshot shows a web browser window for the 'Admin Login' page. The URL is localhost:62951/Airline_Hotel/Admin/Admin_login.aspx. The page features a large background image of an airplane on a runway at sunset. Overlaid on this image is a login form titled 'Admin_login' with fields for 'Admin_name' and 'Password', and buttons for 'Login' and 'Cancel'.

Airline Reservation System

Mange Admin

The screenshot shows a web browser window with the URL localhost:62951/Airline_Hotel/Admin/Manageadmin.aspx. The page title is "Manage Admin". It contains fields for Admin Name (Shravani), Old Password (123), New Password, and Confirm Password. Below the form is a table with columns "Select", "username", and "password". A row is selected with values "Select", "Shravani", and "123". At the bottom, there are buttons for Save, Update, Delete, and Cancel.

Company Home Page

The screenshot shows a web browser window with the URL localhost:62951/Airline_Hotel/. The page title is "Airline Reservation System". It features sections for Air India, GoIndigo, SpiceJet, and Star Air, each with contact details. To the right, there is a graphic of an airplane flying over a purple circular sunburst background.

Airline Reservation System

Company Registration

The screenshot shows a web browser window for 'localhost:62951/Airline_Hotel/User/AirlineRegistration.aspx'. The title bar says 'localhost:62951/Airline_Hotel/User/AirlineRegistration.aspx'. The page has a green header with the 'Airline Reservation System' logo and navigation links for Home, View Booking, Visa, View Airlines, Feedback, Login, and Sign Up. The main content area is titled 'Airline Company Registration' and contains fields for Company ID (7), Company name, Email ID, Website, Contact number, username, and password. Below these fields are 'Submit' and 'Cancel' buttons. A note at the bottom says 'Already Have An Account? [Log In Now](#)'. To the right of the form is a cartoon illustration of a woman interacting with a smartphone displaying a calendar.

Airline Company Login

The screenshot shows a web browser window for 'localhost:62951/Airline_Hotel/User/Airlinelogin.aspx'. The title bar says 'localhost:62951/Airline_Hotel/User/Airlinelogin.aspx'. The page has a green header with the 'Airline Reservation System' logo and navigation links for Home, View Booking, Visa, View Airlines, Feedback, Login, and Sign Up. The main content area is titled 'Airline Company Login' and contains fields for Enter Username and Enter Password. Below these fields is a 'Login' button. A note at the bottom says 'Don't Have An Account? [Sign Up Now](#)'. To the right of the form is a cartoon illustration of a woman interacting with a smartphone displaying a calendar.

Airline Reservation System

Flight Details

This screenshot shows the 'Flight Details' page of the Airline Reservation System. At the top, there are input fields for Flight ID, Company Name, Flight Number, Total Capacity, First Class Capacity, Economy Capacity, and Business Capacity. Below these are four buttons: 'Add new', 'Save', 'Update', and 'Delete'. A table below the buttons displays a list of flights with columns: Company Name, Flight ID, Flight Number, Total Capacity, First Class Capacity, Economy Capacity, and Business Capacity. The table contains 12 rows of data.

	Company_Name	Flight_ID	Flight_Number	Total_Capacity	First_Class_Capacity	Economy_Capacity	Business_Capacity
Select	Vistara	36	782349	260	40	150	70
Select	Vistara	37	28372	260	70	150	40
Select	Vistara	38	26381	260	40	140	80
Select	Vistara	39	827337	260	80	140	40
Select	Vistara	40	26357	250	0	200	50
Select	Vistara	41	5623	250	50	200	0
Select	Vistara	42	28712	260	10	150	50

Add flight Details

This screenshot shows the 'Add Flight Details' page. It includes fields for Company Name (Vistara), Flight No. (26357), From City (Mumbai), To City (New Delhi), Date (empty), Departure Time (12am), Arrival Time (12am), Flight Types (First Class, Economy, Business), Available Seats (0, 200, 50), Travel Duration (empty), Airport Name (empty), Ticket Price (empty), and Description (empty). Below the form is a table with columns: Flight_no, CompanyName, Start_place, Destination_place, Date, DepartureTime, ArrivalTime, firstclassavailableseat, economyavailableseat, businessavailableseat, TravelDuration, AirportName, Price, and Description. The table contains one row of data.

Flight_no	CompanyName	Start_place	Destination_place	Date	DepartureTime	ArrivalTime	firstclassavailableseat	economyavailableseat	businessavailableseat	TravelDuration	AirportName	Price	Description	
Select	782349	Vistara	Kochi	Ahmedabad	3/5/2024	12am	12am	40	150	70	3h 40m	Cochin International Airport	8599	Airport is first fully solar powered in the world.

Airline Reservation System

Goods

Screenshot of the 'Goods' input form in the Admin Panel:

The page title is "Airline Reservation System". The header includes "ADMIN PANEL | Logout". The main section is titled "Goods" and contains the following fields:

Pass Number	<input type="text"/>
Goods Name	<input type="text"/>
Weight	<input type="text"/>
Name Of Customer	<input type="text"/>
Delivery Address	<input type="text"/>
Receiver Phone	<input type="text"/>
Receiver Email	<input type="text"/>

At the bottom are two buttons: "Submit" and "Cancel". A footer note says "Project By : Shravani & Gouri".

Contact Us

Screenshot of the "Visa" service page in the User section:

The page title is "Airline Reservation System". The header includes "Login | Sign Up" and "Contact Us". The main section is titled "Why Choose us?" and lists three services with icons:

- Visa Services for all Countries (Icon: globe)
- 9 Years of experience in Visa Processing (Icon: robot)
- Safety & Confidentiality (Icon: padlock)

Below this is a section titled "General Visa Guidelines for all Countries" with the following text:

Visa is the most crucial document for a traveller as it is the only document which can make your travel plans.

1. **Documentation:** You will need clear documentation while you apply for a visa. Your passport is the most important document you will need. Make sure that your passport is valid for six months post your travel dates. If your passport is about to expire, your chances of getting a visa are almost nil. Many countries will also ask you to come for an interview or to provide your biometrics.

2. Start at the beginning: You need to be clear about your travel dates. Almost all the consulates will ask you to submit your travel dates.

3. You will need to apply for a visa at least one month in advance. You need to remember that each country has its own procedure and time frame for visa clearance. So make sure that you have enough time on hand just in case the consulate asks for additional documentation. While a Schengen visa may take only a week or so, a visa to Canada takes up to 35-40 working days.

4. If you are applying for a visitor visa, you will need to show your personal financial records along with your itinerary number, Insurance, accommodation etc.

5. A business visa, on the other hand, will require an invitation from the counterpart and you will need to furnish your company records, along with a company letter for the same.

6. While applying for a student visa, you will need to show your college admission documents along with your financials. One of the major requirements for a student visa is student travel insurance.

Airline Reservation System

The screenshot shows a Microsoft Edge browser window with the URL localhost:62951/Airline_Hotel/User/Visa.aspx. The page content discusses visa requirements:

5. A business visa, on the other hand, will require an invitation from the counterpart and you will need to furnish your company records, along with a company letter for the same.

6. While applying for a student visa, you will need to show your college admission documents along with your financials. One of the major requirements for a student visa is student travel insurance.

7. A point to remember is that if the consulate feels that they need further documentation, they will send you an invitation asking for additional details. You can read through a checklist of common documents that are a must for applying for a visa to any country on our blog.

Our specialised Visa department offers proficient and value-enhanced Visa services which ensure timely delivery of your Visa. Our Visa experts are professionals with several years of experience and excellent knowledge on Visa regulations for various countries.

The following checklist of common documents is a must for applying (or getting) a visa to any country:

- Passport (current and old)
- Passport size photographs (at least 2)
- Birth Certificate (with name of both parents)
- Visa forms from the respective consulates
- Purpose of visit
- Financial Documents (Bank Statements/Taxation Documents)
- Marriage Certificate (if applicable)
- Professional and academic documents

So, keep these things in mind and plan your trip well in advance to avoid last minute complications and hassles.

Airline Reservation System

Booking

Screenshot of the Airline Reservation System Booking Form page.

The form includes fields for PNR No (23), Customer Name (Shravani Maske), Flight Name (782349), Starting Place (Kochi), Ticket Price (8599), Date of Journey (3/9/2024), Aadhar No (1111223344556789), Number Of Tickets (1), Ending Place (Ahmedabad), and Total Price (8599).

Payment Details section shows Payment ID (12), Payment Date (3/15/2024), CVV (365), Amount (8599), Total Amount (8630.88), and Booking ID (23). It also includes an Online Payment section with Bank Name (SBI), Card No (218798765432), CVV (365), and Expiry Date (09/24).

Buttons at the bottom include Book Now and Print Bill.

Screenshot of the generated PDF Bill Report titled "BILL Report".

The report header includes the Airline Reservation System logo and the date (3/6/2024). It displays the customer's name (Shravani Maske) and the payment details table:

Payment_id	flight_nm	amount
13	782349	42995
GST:		12 %
Amount :		48154.00

At the bottom of the PDF, there is a "Mail" button.

Feedback Form

The screenshot shows a web browser window for 'localhost:62951/Airline_Hotel/Customer/Feedback.aspx'. The header includes a phone icon (9011293700), an email icon (airline@gmail.com), 'Welcome Shravani Maske' (Logout), and navigation links for Home, View Booking, My Profile, Cancel Booking, Feedback, and Complaints. The main content area is titled 'Feedback Form' and contains fields for Customer Name (Shravani Maske), Email ID (maskeshravani5@gmail.com), Mobile No (7065891256), Airline Company Company (Vistara), and Openion (Flight Services are good). Below the form are 'Submit' and 'Cancel' buttons. To the right is a logo featuring a stylized airplane and people.

Feedback Form

Airline Reservation System

Contact Us

The screenshot shows the 'Contact Us' page of the Airline Reservation System. At the top, there's a header bar with a phone number (9011293700) and an email address (airline@gmail.com). Below the header is a navigation bar with links for Home, View Booking, Visa, View Airlines, Feedback, and Contact Us. The main content area has two sections: 'Contact Us' on the left and 'Grievance Redressal Procedure Form' on the right. The 'Contact Us' section contains information about FlightBettails Registration and contact details (Email: cusstreations@gdc.com, Call: +91 9834800529, OR, Call: +91 7083153860). The 'Grievance Redressal Procedure Form' section includes fields for Name (Gouri Patil), EmailID (gourip2023@gmail.com), Contact No (7083153860), Subject (Ticket Information), and a large message area containing the text 'Please change the ticket'. A 'Send' button is located at the bottom of the form.

Project By : Shravani & Gouri

This screenshot shows the same 'Contact Us' page as the previous one, but with a modal dialog box overlaid. The dialog box displays the message 'Data saved successfully!!!...' and a checkbox option 'Don't allow localhost:62951 to prompt you again'. It also features an 'OK' button. The rest of the page content, including the 'Contact Us' and 'Grievance Redressal Procedure Form' sections, is visible in the background.

Project By : Shravani & Gouri

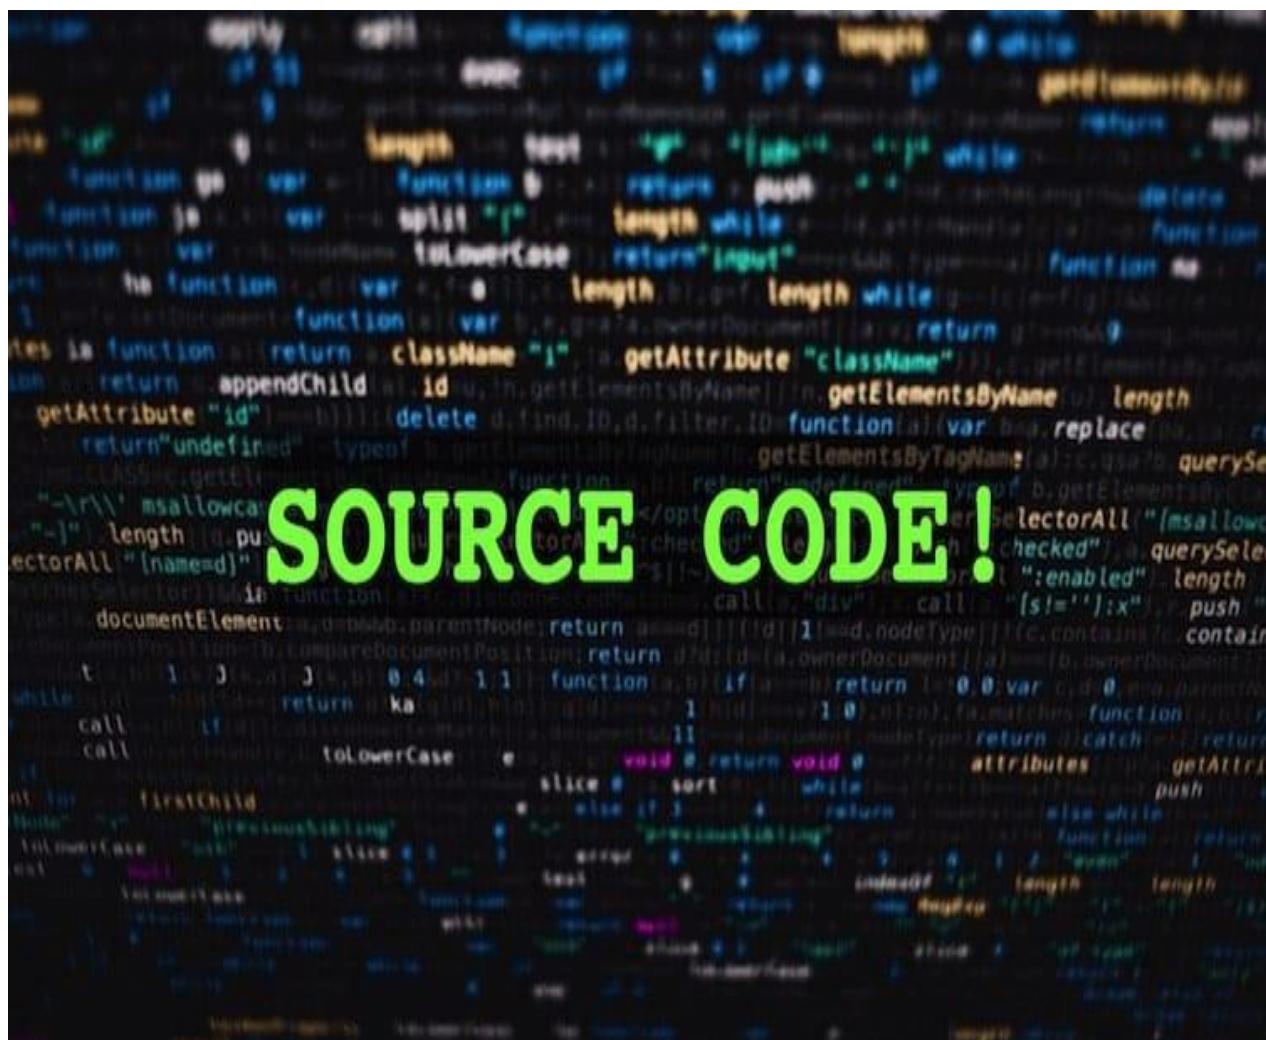

Dr. Patangrao Kadam Mahavidyalaya, Sangli

Goods

The screenshot shows a web browser window for the 'Airline Reservation System'. The URL is 'localhost:62951/Airline_Hotel/Airline/Goods.aspx'. The page has a green header bar with the system logo and navigation links: Home, Manage Airlines, Manage Admin, and Report. On the right of the header is 'ADMIN PANEL | Logout'. Below the header, the main content area is titled 'Goods' and contains a form with the following fields:

Pass Number	14352
Goods Name	Electronics
Weight	15000
Name Of Customer	Abhijeet Sardeshmukh
Delivery Address	chennai
Receiver Phone	9856524223
Receiver Email	sardeshmukhabhi8@gmail.com

At the bottom of the form are two buttons: 'Submit' and 'Cancel'. A black footer bar at the bottom of the page displays the text 'Project By : Shravani & Gouri'.

User Manual

User Manual

User manual is nothing but the understanding the computerized system easily without using the system actual. User manual gives the information to user what actual the system contains & how it works, what system requires & what it gives output.

When you open system display login web in the you can enter user name and password. Now allows you to use system.

Our system contains the following menu

1. Master
2. Report
3. Exit

1) Master

The first menu is master. In this menu Reservation Clerk can enter customer's information. Destination information and flight records.

2) Report

Report is the third menu. Reservation clerk checks the various records by using this menu.

3) Exit:

This is the fourth and last menu. User can close the system by using the menu.

Future Enhancement

Future Enhancement

This project can be made online so that user can book and cancel his ticket online from anywhere.

The online Airline Reservation System is the next generation address book which will provide these two basic services like portability, security.

The project will be useful for any school and colleges with slight modification.

Project is flexible i.e. any change/ modification in database may be performed easily.

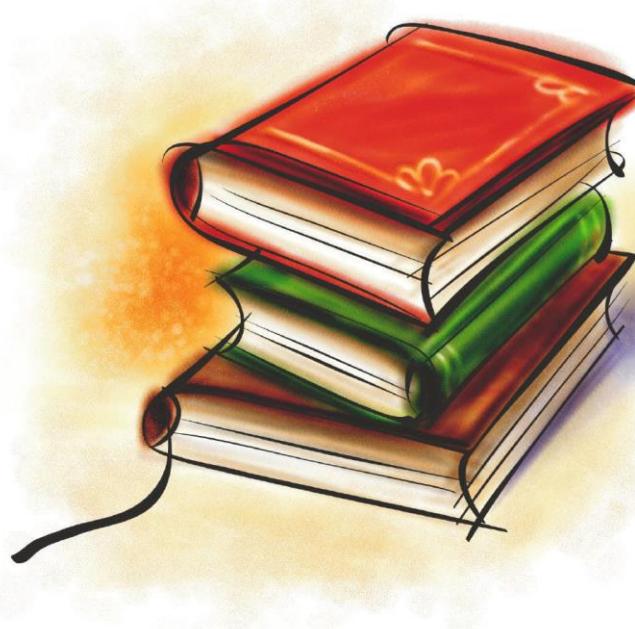

Conclusion

Conclusion

It has been a great pleasure for me to work on this existing and challenging project. This project proved good for me as it provided practical knowledge of not only programming in Adobe Dreamweaver web based application and no some extent Windows Application and SQL Server, But also all handling procedure related with “**Alliances**”. It also proves knowledge about the latest technology used in developing web enabled application and client server technology that will be great demand in Future

This will provide better opportunities and guidance in future in developing projects independently. The purpose of object oriented programming is to have code that is structured and organized. For the most part, you'll find yourself in situations where you'll be reusing code. Instead of having to recreate that same logic for each project, you can have a class that does most of the work for you.
